

TESAB ROTOCRUSHERS are used throughout the world for the crushing and recycling of a wide variety of materials.

The crushers produce an excellent cubic shape of stone, providing a high percentage reduction in one pass. Successful processing of granite, quartz, basalt, gravels, coal and limestone can be achieved, or used as a recycling unit for asphalt, bark, rubble and slag products.

- Feed size up to 200mm
- 100 - 150 tonnes per hour capacity
- Excellent cubic shape of product
- Environmentally friendly power unit conforms to noise and emission control levels
- Rugged chassis and conveyor construction
- Fully mobile and static crushing and screening machines
- Reversible self locking hammers and replaceable wear parts for long life and minimum maintenance.
- Used as secondary and tertiary crushers
- Ideal for recycling of reclaimed materials

- ① TESAB Engineering - Ireland
- ② TESAB Svenska - Sweden
- ③ L'Heureux - France
- ④ Finlay Hire (ECC Quarries)
